Address: Qiaotou, Bao'an, 511464, Shenzhen, China (Home)

ABOUT ME

I am **Md. Sadi**, a graduate in **Electronics Information Engineering** with a strong interest in technology and problem-solving. I am applying for a Master's program to further develop my technical knowledge and gain a deeper understanding through research and practical learning. I enjoy exploring how engineering concepts can be applied to solve real-world problems. I look forward to studying in a collaborative academic environment where I can learn from experienced researchers, work with fellow students, and continue developing the skills needed to contribute to future technological innovations.

WORK EXPERIENCE

PRODUCT MANAGER – SWIFTPLUS TECHNOLOGY COMPANY LIMITED – 25/07/2024 – Current – SHENZHEN, CHINA

- Define and execute the product vision, strategy, and roadmap for mobile payment solutions.
- Identify market trends and customer needs to drive innovation and competitive advantage.
- Oversee the design, development, and enhancement of payment gateway services, mobile payment solutions, SDKs, and APIs.
- Collaborate with engineering teams to ensure seamless integration of payment solutions into mobile apps and websites.

OVERSEAS SALES & DEVELOPMENT ENGINEER – SHENZHEN ERAN TECHNOLOGY COMPANY LTD – 16/12/2023 – 20/07/2024 – SHENZHEN, CHINA

Target potential customers in your assigned overseas territory and assess their needs to determine whether your company's products or services are a good fit. Building trust and rapport with potential clients is crucial. This involves frequent communication, understanding their specific requirements, and becoming a trusted advisor. Work with clients to find mutually beneficial agreements on pricing, contracts, and other terms to secure sales.

INTERNATIONAL PROJECT DELIVERY ENGINEER – WHALE CLOUD TECHNOLOGY COMPANY LTD., - ALIBABA CLOUD – 15/10/2019 – 31/12/2022 – NANJING, CHINA

Department: BSS | **Website:** <https://online.iwhalecloud.com/>

Worked at the MOTN (Modernization of Digital Telecommunications Network) project of Bangladesh Telecommunication Company (BTCL), bringing the optical fiber FTTH-based technology to Bangladesh. It's also called the N2 Project from our company. We have completed and installed the software and hardware parts and tested them several times. The government has already launched this MOTN project.

EDUCATION AND TRAINING

09/2016 – 06/2020 Nanjing, China

BACHELOR OF SCIENCE Nanjing University of posts and telecommunications

Digital Signal Processing, Data Communication, Embedded Systems, Optical Fiber Communication, Wireless Networks, Information

Theory, Computer Architecture, IoT, C programming, Python, JavaScript.

Website <https://www.njupt.edu.cn/en/> | **Field of study** Electronic Information Engineering |

Thesis Internet traffic classification based on nearest neighbors.

01/2011 – 01/2013 Dhaka, Bangladesh

HIGHER SECONDARY SCHOOL CERTIFICATE Notre Dame College

Website <https://ndc.edu.bd/> | **Field of study** Natural sciences, mathematics and statistics

01/2003 – 12/2010

SECONDARY SCHOOL CERTIFICATE Mymensingh Zilla School

Website <http://www.mzs.edu.bd/> | **Field of study** Natural sciences, mathematics and statistics

● **LANGUAGE SKILLS**

Mother tongue(s): **BENGALI**

Other language(s):

	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken production	Spoken interaction	
ENGLISH	C1	C2	B2	B2	B1
CHINESE	B1	A2	B1	B1	A1
ARABIC	A1	B2	A1	A1	A2
HINDI	B2	A1	B2	B2	A1

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

● **HONOURS AND AWARDS**

09/09/2016

Nanjing Municipal Government International Students Scholarship – Jiangsu Government – Nanjing Government

Received the Nanjing Municipal Scholarship for outstanding performance in the university entrance examination, recognizing academic merit and strong academic potential.

10/02/2020

Best Young Talent – Alibaba Cloud

17/01/2020

ZSmart BSS Product Training – Alibaba Cloud

[**Air pollution prediction and classification with a hybrid ANN-LSTM model in modern cities: a comparative study**](#)

Air pollution caused by urbanization and industrial activities has become a serious environmental and public health concern. This study examines air pollution in urban and industrial areas and proposes a hybrid model to predict and classify air quality levels. The model combines Artificial Neural Networks (ANN) and Long Short-Term Memory (LSTM) networks to better capture the complex patterns and time-dependent characteristics of air quality data. A dataset containing more than 60,000 samples of air pollutants, including particulate matter (PM2.5), was used to evaluate the model. These pollutants were selected as important indicators of air quality. The performance of the hybrid ANN-LSTM model was compared with several other machine learning models, including Linear Regression, Random Forest, Decision Tree, ANN, and LSTM. The results show that the proposed hybrid model achieved better performance than the other models, reaching an accuracy of 94.87% along with strong precision, recall, and F1-scores. It also produced lower prediction errors across MSE, RMSE, and MAE, while achieving a higher R²

value and lower MAPE, indicating more reliable air quality predictions. Overall, the findings suggest that this hybrid approach can improve air pollution forecasting and support better environmental monitoring and public health decision-making.

Real-Time Vehicle License Plate Detection and Recognition Using YOLOv9 and OCR Framework in Urban Traffic

Vehicle License Plate Recognition (VLPR) plays an important role in intelligent transportation systems by enabling automatic vehicle identification for traffic monitoring, law enforcement, and smart city management. However, recognizing license plates in busy urban environments is challenging due to factors such as occlusion, motion blur, changing lighting conditions, different plate formats, and the use of multiple languages. In Bangladesh, license plates typically include both Bangla and English characters, which adds further complexity to the recognition process. This study proposes a real-time license plate detection and recognition system using a deep learning-based approach combined with an Optical Character Recognition (OCR) pipeline. A YOLOv9-based model is used to detect and localize license plates from video streams, followed by region-of-interest extraction and multilingual text recognition with additional validation steps. The system was tested using a custom dataset collected under various urban traffic conditions, including heavy traffic, different lighting environments, and partially obstructed plates. Experimental results show that the proposed system achieved a detection F1-score of 0.99, while the OCR component reached a character recognition accuracy of over 99.97%. The system also maintained real-time performance at more than 35 frames per second. These results indicate that the framework is efficient, reliable, and suitable for real-world traffic monitoring and intelligent transportation applications.

● **CONFERENCES AND SEMINARS**

25/10/2018 Huzhou, Zhejiang, China

Participator in international symposium of IKCEST under the auspices of UNESCO

In 2018, I participated in the International Symposium of the International Knowledge Centre for Engineering Sciences and Technology (IKCEST), held under the auspices of UNESCO. The event brought together experts, researchers, and young professionals to discuss developments in engineering, technology, and digital innovation.

Link <http://www.ikcest.org/index.htm>

● **MANAGEMENT AND LEADERSHIP SKILLS**

04/07/2017 – 07/09/2019

Vice President of International Students Union

- Assisted in leading the International Students Union and supporting the interests and welfare of international students on campus.
- Coordinated cultural, academic, and social events to promote interaction between international and local students.
- Worked with university administration to address international student concerns and improve campus support services.
- Helped organize orientation programs and activities for newly arrived international students.
- Promoted cross-cultural exchange by planning international festivals, seminars, and networking events.
- Supported communication between international students and different university departments.
- Collaborated with the student union team to plan and manage student engagement initiatives.

● RECOMMENDATIONS

Dr. Xiao Jian Deputy Dean of College of Integrated Circuit Science and Engineering

I strongly support him to be considered as a potential candidate for acceptance to the graduate program in your esteemed university with possible financial assistance regarding scholarships.

Email xiaoj@njupt.edu.cn | **Phone** (+86) 13951983176

Dr. Yulong Deng Faculty of Computer Science

Md. Sadi is a motivated and dedicated student with a strong work ethic. He shows genuine curiosity and a willingness to explore new ideas and concepts in his field. He consistently stays informed about recent developments and approaches his work with confidence and enthusiasm. In addition to his academic abilities, he demonstrates strong teamwork and leadership skills. As his teacher, I have had the opportunity to observe his commitment and positive attitude toward learning and collaboration.

Email dyl@njupt.edu.cn | **Phone** (+86) 13801588232

Xiaodong Bai Associate Professor

He has strong English communication skills and has demonstrated good writing ability through the project reports he completed under my supervision. In addition to his academic work, he actively participates in extracurricular activities. He served as a co-team leader in the NJUPT International Students Union and is also an active member of the Science & Technology Club and the C3 Coding Club. Furthermore, he has shown excellent organizational skills by helping to manage and coordinate several cultural events. His leadership qualities, technical knowledge, and active involvement in both academic and extracurricular activities make him a strong candidate for graduate study in your program.
